

Gaëtan CARRÉ

Software Engineer - Infrastructure

✉ gaetancarre.pro@gmail.com ☎ +33781762870 📍 Paris, France (Willing to relocate) 🌐 Gaetan CARRE 🔄 GaetanCARRÉ

📁 PROFESSIONAL EXPERIENCE

Thales  09/2024 – Present
DevOps Engineer

- Utilized **Flask (Python), React, Docker, and GitLab CI** to develop and deploy a **microservices-based** application in production. This solution automates network flow management across the entire Thales network, reducing ticket implementation time by **66%**.
- Defined and implemented NetOps standards across network teams, ensuring consistency in automation processes.
- Optimized CI/CD pipelines using GitLab CI and **Ansible**, integrating automated tests and security validation, resulting in an 80% reduction in deployment times.

Thales  09/2022 – 08/2024
DevOps Engineer (apprenticeship)

- Established KPIs to measure team performance, identify recurring issues, and guide strategic decisions. Analyzed and processed data using **Python** with **Pandas**, followed by data visualization for trend understanding.
- Designed the **architecture** and developed a microservices-based application (**Flask, React, MongoDB**) to automate firewall flow management.
- Leveraged a modern tech stack (React, Flask, MongoDB) to create dynamic user interfaces and **backend** services, ensuring **optimal performance** and enhanced user experience.
- Developed Python scripts to automate configuration and firewall management processes.
- Employed **Ansible** to automate firewall configuration deployments, reducing human error and improving operational efficiency.

🎓 EDUCATION

ECE Paris  2021 – 2024
Engineering degree in Information system and Cybersecurity

- Information Systems Security | Network Security | Forensics | Reverse Engineering | Incident Response | DevOps | Windows Security & Hybrid Identity Security (Microsoft Partnership) | Software Engineering

Sup Galilée 2019 – 2021
Intensive preparation for French Engineering school

Honoré de Balzac Mitry-Mory 2018 – 2019
High School diploma, scientific option

🧠 SKILLS

Programming Languages: Python (Flask, Pandas, Scikit-Learn), Go, C, JavaScript, React, Java, C#, SQL, NoSQL

Technical: Data Structures and Algorithms, REST API, gRPC, Object-Oriented Programming, System Architecture

DevOps: Docker, Ansible, Gitlab CI/Github Actions, Kubertenes, Infrastructure as Code (Terraform), GCP

Firewalling: Palo Alto & Panorama, Juniper SRX

Cybersecurity: Network Security, Active Directory, Penetration testing, Risk Compliance

OS: Linux/Unix, Windows

Soft skills: Committed, Curious, Team Player

English: C1, TOEIC 950

📁 PROJECTS

Finsight, Net-worth aggregator for stocks, ETFs & crypto (building)

Go, Python, MongoDB, React

- Designed and built a modular, **product-driven platform** to help investors track and analyze their portfolios with performance insights, diversification metrics, and dividend tracking.
- Deployed with Docker + Nginx on VPS, structured to support future horizontal scaling and cloud migration. Created
- Created a Scalable Architecture

GoFlix

Technologies: Golang, React

- Simplified recreation of the Netflix streaming platform with navigation features and video streaming playback, administration enabling platform orchestration, addition of movies, etc. User identification is managed by JSON Web Tokens (JWT).
- CI/CD with GitHub Actions to automate deployment to the cloud.

Web vulnerability scanner (final course project)

Technologies: Python (flask), React

- Developed a local application using React and Flask to scan a website based on its URL for common types of attacks such as SQL injections, XSS.
