PROFESSIONAL EXPERIENCE

Thales 09/2024 – Present

DevOps Engineer

- Designed, developed, and deployed a production-grade microservices application using **Python (Flask), React, Docker, and GitLab CI** to automate network flow provisioning across the entire **Thales** network, reducing ticket implementation time by **66%**.
- Defined and rolled out **NetOps standards** across network engineering teams, establishing consistent automation frameworks and improving cross-team alignment.
- Optimized and re-architected **CI/CD pipelines** (GitLab CI, Ansible) by integrating automated testing and security validation gates, decreasing deployment time by **80%** while increasing release reliability.
- Designed and implemented a **unified Source of Truth (SoT)** for firewall objects, fully automating configuration creation and updates. Achieved **100% alignment between infrastructure and SoT**, improved rule reliability, strengthened security posture, and eliminated **30% of redundant configurations** during large-scale remediation.

Thales 09/2022 – 08/2024

DevOps Engineer (apprenticeship)

- Established KPIs to measure team performance, identify recurring issues, and guide strategic decisions. Analyzed and processed data using **Python** with **Pandas**, followed by data visualization for trend understanding.
- Designed the **architecture** and developed a microservices-based application (**Python, React, MongoDB**) to automate firewall flow management.
- Automated firewall configuration deployments using **Ansible** and **Python** to streamline firewall configuration and management processes, reducing manual workload and improving efficiency.

EDUCATION

ECE Paris 2021 – 2024

Engineering degree in Information system and Cybersecurity

- Information Systems Security | Network Security | Forensics | Reverse Engineering | Incident Response | DevOps | Windows Security & Hybrid Identity Security (Microsoft Partnership) | Software Engineering

Sup Galilée 2019 – 2021

Intensive preparation for French Engineering school

Honoré de Balzac Mitry-Mory 2018 – 2019

High School diploma, scientific option

SKILLS

Programming & Backend: Python, Go, JavaScript (React), C, Database (SQL, NoSQL), Data structures

APIs & Architecture: REST, gRPC, Microservices Architecture, Event-Driven Systems, RabbitMQ

DevOps: Docker, Ansible, Gitlab CI/Github Actions, Kubertenes, Infrastructure as Code (Terraform), GCP

Network Automation & Security: Palo Alto (+Panorama), Juniper SRX, Network Security, Firewall Policy Management

Observability: Grafana, Loki, Alloy

Certifications: Cisco CCNA Automation

Soft skills: Committed, Curious, Team Player

English: C1, TOEIC 950

PROJECTS

Wealthscale, Aggregator for stocks, ETFs & crypto

Go, Python, React, MongoDB,

A modern portfolio management platform for tracking investments across multiple brokers. Features real-time portfolio valuation, TWR performance metrics with benchmark comparison, automated broker imports, asset screener with fundamental data, and dividend tracking.

GoFlix

Go, React

- Simplified recreation of the Netflix streaming platform with navigation features and video streaming playback, administration enabling platform orchestration, addition of movies, etc. User identification is managed by JSON Web Tokens (JWT).
- CI/CD with GitHub Actions to automate deployment to the cloud.

AI Agent CLI

Python

Autonomous AI agent (LLM API) with execution loop and function calling. Capable of interpreting requests, dynamically calling tools and executing Python code.
